Regarding the response to the COVID-19 infection at Tenri University
(To everyone in the local community)

Tenri University

Tenri University thanks the local residents of Tenri for the constant support for our University.

From the middle of March, a large number of our students became infected with COVID-19. We apologize for causing everyone in the local community to worry.

Presently, in Nara and the neighboring prefectures, infection is on the rise, and the situation remains unpredictable. In addition, the city of Tenri has requested our University to take a drastic strengthening of infection prevention measures.

Judging comprehensively from the above, we have decided to close school from April 19 (Monday) to April 25 (Sunday), and to prohibit all club activities for the time being.

In order to prevent the spread of infection, we will strive to ensure the safety and security of the local community while sharing information with the city of Tenri. We would like to ask all of you for your kind understanding.

※ We ask for your understanding and consideration to respect the human rights of the infected students and related parties, and to protect personal information.
